

Looking for more functionality from your Service Management System? Do you have technicians in the field located hours or hundreds of miles away? **Our Technician Systems provide tools to make them more productive!**

Unlike other service system solutions, Dynamite offers many unique features that get the information to where it will do the most good -- the person actually doing the work. The entry of data is faster and more accurate while ultimate control over the order is retained by the main office. This system can pay for itself in days.

DynaTech Systems

The Dynamite Technician Systems are built upon the award winning Dynamite Service System enabling you to run your business better by taking advantage of the data already available.

Choice of Interfaces

DynaTech is available as a laptop solution or as an Internet-connected PDA solution. Each one brings the data to the technician in the field and captures what work has been performed at the source.

Technicians are paid to fix equipment quickly and efficiently. They cannot be burdened with fancy, complex computer solutions that are designed to make the accountant's job easier.

Simple yet powerful. Easy to use yet information rich. Adaptable to your corporate needs yet virtually indestructible.

Virtually Indestructible

L-DynaTech, the laptop solution, is a 32-bit Windows-based system that delivers service-related information to the field technician in an easy-to-use, hard-to-break software solution.

L-DynaTech has only one display screens, two reports, and no index files or menus. If the databases or software become corrupt, they can be replaced by merely logging onto your web site and replacing the missing pieces.

PDA Solution

Modern Personal Digital Assistants have Internet capabilities and have built-in web browsers. The e-DynaTech solution is designed to interface with the tiny PDA screens while enabling your technician to remotely access data, update work progress, enter work order charges, and even create new orders...all on line!

Customer Usage Also

Because of it's flexibility and low cost, DynaTech can be made available for your customers' use giving them better information.

Low Investment Cost

L-DynaTech is easy and quick to install. It will run on almost any type of Windows computer. E-DynaTech can be run on any PDA with and Internet browser. No other PDA software is necessary.

Both solutions offer the ultimate in flexibility while keeping your hardware investment to a minimum.

Minimum Requirements

E-DynaTech is included in the e-Dynamite product while L-DynaTech is sold separately.

System Features

Intuitive Screens

Examples of clear, uncluttered screens are shown. The displays use both visual and textual navigation buttons for intuitive use. Several reports are available including a customer receipt and status report.

The screens and functions of DynaTech complement standard Dynamite functions and add many new functions that capitalize on the data already available.
